

Fairfax Green™ is a program from Fairfax Lumber & Hardware, to provide nature friendly products and information to our customers.

Fairfax Green™ is the convergence of four goals – conservation of natural resources, increased energy efficiency, improved indoor air quality, and the reduction of toxins in our environment.

It is our effort to provide sustainable and healthful choices and products in lumber, building materials, plumbing, electrical, coatings, and garden areas.

This is our way to help you build a more comfortable, healthful, durable and nature friendly home that costs less to maintain.

## About Us

Since 1912 Fairfax Lumber & Hardware has been providing Marin County with quality building materials and help. Today we are 100% employee owned and have become Marin's leading expert and provider of nature friendly products for its building and improvement needs.

Local consumers have a much higher awareness and regard for building material science, health risks, and green alternatives. The demand for these nature friendly materials has fueled new products in a broad range of building material categories. To that end we developed the Fairfax Green™ program to alert our customers to products that are renewable, biodegradable, use resources more efficiently, and create less waste and pollution.

Look for the Fairfax Green™ brand mark to assure these nature friendly building products.
